Hävdad våtmark

Övrig våtmark

Substratmark

Övrig öppen mark

Ädellövskog

Triviallövskog med ädellövinslag

Lövsumpskog

Exploaterad mark

Skala 1:10 000

The map displays the Beijershamns naturreservat, a coastal area with a large body of water (Hav) to the north and west. The reserve's boundary is marked by a thick dashed line. Key geographical features include the islands of SVANSHOLMARN and STORA VICKLEBY. The map is color-coded and patterned to represent different vegetation types: light blue for water, light green with vertical lines for mowed wetland (Hävdad våtmark), light green with dots for other wetland (Övrig våtmark), orange with dots for substrate land (Substratmark), orange with diagonal lines for other open land (Övrig öppen mark), dark green with diagonal lines for Alder forest (Ädellövskog), light green with dots for Trivial alder forest with Alder inslag (Triviallövskog med ädellövinslag), dark green with dots for Alder swamp forest (Lövsumpskog), and grey with a grid pattern for exploited land (Exploaterad mark). Numerous numerical codes are scattered across the map, indicating specific vegetation types or land use categories. A yellow line labeled 's:6' runs along the eastern edge, and a red dashed line is visible in the lower right. A small inset map shows the location of the reserve within a larger geographical context.
